

## Digital Retinal Imaging & iWellness Scan Available

The Digital Retinal Imaging (DRI) process captures a surface photo of the eye and assists us in early detection of many disorders, including: Glaucoma, diabetic retinopathy, macular degeneration, retinal detachments and numerous other vision threatening conditions.

The iWellness Optical Coherence Tomography (OCT) scan captures more in depth photos allowing our doctors to see beneath the surface of the retina. This unique technology can help us detect vision threatening and systemic diseases in their very early stages when most treatable.

### **We strongly recommend that all patients have these procedures performed.**

The images are stored in our computer system, allowing us to compare and observe even the slightest changes in your eye health from exam to exam.

It is especially important for new patients and people who have:

1. Headaches
2. Spots/flashes of light in their vision
3. Reached age 40 or older
4. Family history of Glaucoma
5. High cholesterol
6. High blood pressure, or family history of hypertension
7. Diabetes, or family history of diabetes (type 1 or 2)

There is an additional charge of **\$44** for the Digital Retinal Imaging (DRI) and **\$44** for the iWellness scan (OCT). Or package both procedures together for **\$62**. Your vision insurance **WILL NOT** cover these procedures and payment is expected at the time of service.

Please check the appropriate Line and sign below. Thank you!

- \_\_\_\_\_ I want BOTH the DRI and iWellness scan performed  
\_\_\_\_\_ I want ONLY the DRI or iWellness scan performed (Circle one)  
\_\_\_\_\_ I DO NOT want these procedures performed
